

# Gatwick Flagship Chapter

---

Good morning ladies and gentlemen, my name is Bob Sanders of BE Air Conditioning Ltd.

We are your Environmental specialists. We can design, supply, install and service air conditioning for anything from a small portable unit to a large office complex.

We are approved installers of all the leading brands, which enables us to select units to suit our customer's application and budget.

We are after building companies and developers to introduce the idea of installing CO2 water heaters as opposed to conventional boilers.

These units will provide hot water and heating via radiators similar to a Conventional gas fired boiler.

But unlike a boiler which is 95% efficient the CO2 water heaters are up to 500% efficient. And therefore these units also substantially reduce the Carbon Foot Print of the building.

We bring warmth of summer to winter and the cool crispness of winter to summer.

"We are a breath of fresh air!"
